560100E
560110R

Multi Room Audio Amplifier Enclosure

Installation Instructions

The 560100E empty enclosure is the same size as the 560110R remote amplifier. You can link up to 4 amplifiers and enclosures together for installation in a standard 19-inch equipment rack. Once linked, the amplifiers and enclosures form a rigid assembly that can be placed on a shelf in the equipment rack.

To link units together refer to the drawing and follow these steps:

1. Disconnect any attached cables.
2. Place the units to be joined upside down on a flat surface. Do not remove the rubber feet.
3. Position the square metal plate over the holes in the enclosures and install the four (4) machine screws. Connect additional units as needed.
